Docker镜像配置

```
FROM alpine:latest

# 替换镜像源
RUN sed -i "s/dl-cdn.alpinelinux.org/mirrors.aliyun.com/g" /etc/apk/repositories && \
      # 此处bash可要可不要，tzdata是时区配置
      apk add --no-cache bash tzdata && \
      cp /usr/share/zoneinfo/Asia/Shanghai /etc/localtime && \
      echo "Asia/Shanghai" > /etc/timezone && \
      apk del tzdata && \
      ln -sf /bin/bash /bin/sh && \
  rm -rf /var/cache/apk/*
```
